

Data Technician Apprenticeship

About the Apprenticeship

This Apprenticeship is aimed at individuals wanting to work in or who already work in a role generating and processing data. This is suitable for those within retail, education, health, media, manufacturing and hospitality.

Topics include:

- Source data from a collection of already identified trusted sources in a secure manner
- Collate and format data to facilitate processing and presentation for review and further advanced analysis by others
- Present data for review and analysis by others, using required medium for example tables, charts and graphs

This Apprenticeship also include Functional Skills in English and Maths if required. The final part of the Apprenticeship is an independent end point assessment consisting of two scenario-based demonstrations with questioning and professional discussion.

Duration: 24 months
